Subject Index

Adsorption
Reaction mechanism of methanol dehydrogenation on a sodium carbonate catalyst 131
Alkenes
Barium modification of a high-silica zeolite for methanol conversion to light alkenes 1
Alkylation
Alkylation of benzene with propene to produce cumene over a nickel/γ-alumina catalyst 125
Anatase
Physical and chemical characterization of surface vanadium oxide supported on titania: Influence of the titania phase (anatase, rutile, brookite and B) 27
B-phase
Physical and chemical characterization of surface vanadium oxide supported on titania: Influence of the titania phase (anatase, rutile, brookite and B) 27
Barium modification
Barium modification of a high-silica zeolite for methanol conversion to light alkenes 1
Benzene
Alkylation of benzene with propene to produce cumene over a nickel/γ-alumina catalyst 125
Brookite
Physical and chemical characterization of surface vanadium oxide supported on titania: Influence of the titania phase (anatase, rutile, brookite and B) 27
Carbon monoxide
Activity and structural changes of alumina-supported CuO and $CuCr_2O_4$ catalysts during carbon monoxide oxidation in the presence of water 43
Carbon monoxide oxidation
Infected zone model II: Analyses of published experimental data 97
Carbon monoxide oxidation
Oxidation of carbon monoxide on platinum–tin dioxide catalysts at low temperatures 115
Catalyst characterization (DTA, ESR, IR, TG, TPD, XPS, XRD)
Characteristics of the poisoning effect of nickel deposited on USY zeolite 67
Catalyst characterization (DTA, SEM, TGA, XRD)
Barium modification of a high-silica zeolite for methanol conversion to light alkenes 1
Catalyst characterization (NMR, Raman, XPS)
Physical and chemical characterization of surface vanadium oxide supported on titania: Influence of the titania phase (anatase, rutile, brookite and B) 27
Catalyst characterization (SEM-EAX, XPS)
Activity and structural changes of alumina-supported CuO and $CuCr_2O_4$ catalysts during carbon monoxide oxidation in the presence of water 43
Coking
Characteristics of the poisoning effect of nickel deposited on USY zeolite 67
Copper(II) oxide/alumina
Activity and structural changes of alumina-supported CuO and $CuCr_2O_4$ catalysts during carbon monoxide oxidation in the presence of water 43
Copper–chromium/alumina
Activity and structural changes of alumina-supported CuO and $CuCr_2O_4$ catalysts during carbon monoxide oxidation in the presence of water 43
Corrosion
Reactor materials for use with the Li/MgO methane coupling catalyst 13
Cracking
Characteristics of the poisoning effect of nickel deposited on USY zeolite 67
Deactivation
Infected zone model II: Analyses of published experimental data 97
Dehydrogenation
Reaction mechanism of methanol dehydrogenation on a sodium carbonate catalyst 131
Demethanation
Characteristics of the poisoning effect of nickel deposited on USY zeolite 67
Fluid cracking
Characteristics of the poisoning effect of nickel deposited on USY zeolite 67
Formaldehyde
Reaction mechanism of methanol dehydrogenation on a sodium carbonate catalyst 131

High-silica zeolite
Barium modification of a high-silica zeolite for methanol conversion to light alkenes 1
Hybrid catalyst
Hydroisomerization of n-pentane over hybrid catalysts containing a supported hydrogenation catalyst 81
Hydrocarbon cracking
Characteristics of the poisoning effect of nickel deposited on USY zeolite 67
Hydrogen spillover
Hydroisomerization of n-pentane over hybrid catalysts containing a supported hydrogenation catalyst 81
Impregnation
Design of inhomogeneous metal distributions within catalyst particles 57
Isomerization
Hydroisomerization of n-pentane over hybrid catalysts containing a supported hydrogenation catalyst 81
Lead
Infected zone model II: Analyses of published experimental data 97
Lithium/magnesium oxide
Reactor materials for use with the Li/MgO methane coupling catalyst 13
Metal distribution
Design of inhomogeneous metal distributions within catalyst particles 57
Methanation
Infected zone model II: Analyses of published experimental data 97
Methanol
Reaction mechanism of methanol dehydrogenation on a sodium carbonate catalyst 131
Methanol conversion
Barium modification of a high-silica zeolite for methanol conversion to light alkenes 1
Methanol oxidation
Physical and chemical characterization of surface vanadium oxide supported on titania: Influence of the titania phase (anatase, rutile, brookite and B) 27
Nickel
Infected zone model II: Analyses of published experimental data 97
Nickel
Characteristics of the poisoning effect of nickel deposited on USY zeolite 67
Nickel/alumina
Alkylation of benzene with propene to produce cumene over a nickel/γ-alumina catalyst 125
Nickel/silica
Design of inhomogeneous metal distributions within catalyst particles 57
Oxidative coupling
Reactor materials for use with the Li/MgO methane coupling catalyst 13
Oxygen spillover
Oxidation of carbon monoxide on platinum–tin dioxide catalysts at low temperatures 115
n-Pentane
Hydroisomerization of n-pentane over hybrid catalysts containing a supported hydrogenation catalyst 81
Platinum
Infected zone model II: Analyses of published experimental data 97
Platinum–tin dioxide
Oxidation of carbon monoxide on platinum–tin dioxide catalysts at low temperatures 115
Poisoning
Infected zone model II: Analyses of published experimental data 97
Poisoning
Characteristics of the poisoning effect of nickel deposited on USY zeolite 67
Post-catalytic reaction
Reaction mechanism of methanol dehydrogenation on a sodium carbonate catalyst 131
Preparation
Design of inhomogeneous metal distributions within catalyst particles 57
Propene
Alkylation of benzene with propene to produce cumene over a nickel/γ-alumina catalyst 125
Reactor materials
Reactor materials for use with the Li/MgO methane coupling catalyst 13
Rutile
Physical and chemical characterization of surface vanadium oxide supported on titania: Influence of the titania phase (anatase, rutile, brookite and B) 27
Scanning electron microscopy
Reactor materials for use with the Li/MgO methane coupling catalyst 13

Sodium carbonate
Reaction mechanism of methanol dehydrogenation on a sodium carbonate catalyst 131
Sulphur
Infected zone model II: Analyses of published experimental data 97
Supports
Design of inhomogeneous metal distributions within catalyst particles 57
Synergism
Oxidation of carbon monoxide on platinum–tin dioxide catalysts at low temperatures 115
USY zeolite
Characteristics of the poisoning effect of nickel deposited on USY zeolite 67
Vanadia–titania
Physical and chemical characterization of surface vanadium oxide supported on titania: Influence of the titania phase (anatase, rutile, brookite and B) 27
Water effect
Activity and structural changes of alumina-supported CuO and $CuCr_2O_4$ catalysts during carbon monoxide oxidation in the presence of water 43
X-ray diffraction
Reactor materials for use with the Li/MgO methane coupling catalyst 13
Zeolites
Barium modification of a high-silica zeolite for methanol conversion to light alkenes 1
Zeolites
Hydroisomerization of n-pentane over hybrid catalysts containing a supported hydrogenation catalyst 81
Zeolites
Characteristics of the poisoning effect of nickel deposited on USY zeolite 67
ZSM-5
Hydroisomerization of n-pentane over hybrid catalysts containing a supported hydrogenation catalyst 81
